Temperature Screening & Mask Detection Solution

Contactless, Efficient & Trackable

With a wide range of products and comprehensive software, we have solutions for both SME and NMC customers across multiple industries.

Face Recognition

Time Attendance

Visitor Management

Real-time Notification

Pain Points of Conventional Methods

Conventional methods - such as using an ear thermometer or infrared thermometer have obvious deficiencies in detecting people with abnormal temperature in public places:

- Close Contact, High Risk** - Close contact among the users leads to potential risks.
- High Cost, Low Efficiency** - Increased manpower required, but 1-by-1 inspection is inefficient.
- Lack of Intelligent Analysis** - Manual registration is required, which may lead to human error and not so timely feedback.

We Offer a Better Approach

An approach that incorporates competent technologies, instead of manpower alone, can be a much better choice in many ways. Such an approach is:

<p>Safer</p> <p>Non-contact measurement to avoid physical contact</p>	<p>Faster</p> <p>One second per person for skin-surface temperature detection</p>	<p>Smarter</p> <p>AI detection, greatly reducing false alarms</p>

“Back to Business” Solution for SME Deployment

Temperature Screening & Face Recognition Terminal

- Temperature screening
- Face recognition
- Mask detection
- Mifare card reader
- ±0.5°C accuracy

Multiple Installation Options

- Wall mounted
- Turnstile
- Table stand
- Mounting pole

System Topology (SME Office)

Business Flow (SME Office)

“Back to Business” Solution for Large Corporation Deployment

Mass Temperature Screening and Software Integration

Software Integration

NM Screening Software is developed to enhance the overall solution and meet unique requirements of different companies.

Customised Dashboard

Customised Notification

Analytics Reports

Registration Portal (Visitor)

Remote Check In

SafeEntry Friendly

Group Temperature Screening

Group Screening with High Efficiency

Thermographic Bullet Camera

Supports simultaneous temperature screening of multiple people, greatly enhancing efficiency

Temperature Screening on Patrol

Anytime, Anywhere, Just One Click

Thermographic Handheld Camera

Supports preliminary on-spot temperature screening without disturbing a person

Temperature Screening & Mask Detection

Intuitive Demonstration

Thermographic Camera & DeepinMind NVR

The special interface of DeepinMind NVR visually displaying temperature and mask status

Application Scenarios

School & Dormitory

Retail & F&B Outlet

Office Building & Places of Worship

Exhibition Hall & Event Venue
